

Lucas DK distributors

There are 2 types of 4 Cylinder Lucas DK distributors the DK4(a) and the DKY4(a). Although strictly speaking the latter wouldn't be found on anything but a very late Coventry Riley some cars have had them fitted as replacements over the years. The DK4 has a Bakelite base plate which carries the points etc and has the LT feed going into this base. The DKY4 has an all-metal base, and the LT feed goes between the base casting and the cap in a similar manner to the layout seen on many post war units.

The caps for these are quite different and care is needed to ensure that you order the right one. RRSL stock both:-

For the DK4 RRSL part number DK4DC

For the DKY4 RRSL part number DKY4DC

The points sets are also different and again care is needed to ensure that you order the right one. Again, RRSL stock both:-

For the DK4 RRSL part number DK4CS

For the DKY4 RRSL part number DKY4CS

Lucas DU6 distributors

We understand that the DK4CD condenser and the DK4CS points set also fit this 6-cylinder type. We do advise members to do their own checks though.
